Examiner:

G. Oehling

## SECOND SUPPLEMENTAL AMENDMENT

Honorable Commissioner of Patents and Trademarks Washington, D. C. 20231 May 23, 1994

sir:

This is supplemental to the Supplemental Amendment filed April 29, 1994.

# IN THE SPECIFICATION:

Please amend the specification as follows:

Page i (before Page 1), line 12, change "10-14" to --10-12--.

In the Attached Appendix: Delete the original 15 pages of the Appendix as filed on May 20, 1991 and insert a substitute

Appendix which is attached to this Second Supplemental

Amendment consisting of a cover page and numbered pages 1-12.

080 WC 06/02/94 07702938

1 203

11.00 CK

### IN THE CLAIMS:

Please add new claim 86 as follows:

receiver to a processor under control of a program stored by the processor comprising:

transmitting the information with a RF transmitter to the RF receiver;

the RF receiver signalling the processor on a transmission medium of the processor used for transmission of information by the processor that the received information is stored within memory of the receiver;

controlling the transfer of the stored information from the memory of the receiver to a memory of the processor on the transmission medium with the program; and

processing the information in the memory of the processor with an application program stored in the memory of the processor.

## <u>REMARKS</u>

The Applicants are presenting claim 86 herein which is identical to at least claim 81 of Serial No. 07/702,319 and claim 176 of Serial No. 07/702,939 for the purpose of having the Examiner consider the possibility of double patenting between claims 78, 79 and 81-89 in Serial No. 07/702,319 and claims 160-161 and 176 in Serial No. 07/702,939.

If the Examiner finds the subject matter of at least claim 86 to be present a situation requiring restriction, it is requested that the Examiner indicate in this application on the record to that effect and in Serial Nos. 07/702,319 and 07/702,939, respectively, with respect to claims 78, 79 and 81-89 and 160, 161 and 176. If restriction is required in this application and in Serial Nos. 07/702,319 and 07/702,939 regarding at least the subject matter of claim 86, Applicants will cancel the subject matter so restricted from all applications now pending and file a divisional application.

Newly submitted claim 86 covers the operation of the receiver 119 transferring originated information to the destination processors, as illustrated in Fig. 10, as described on pages 43 and 44 of the specification and pages 1-9 of the Appendix. Claims 68 and 69, which are respectively dependent on claims 137 and 157, also recite aspects of the transfer of the other originated information for use with application programs.

The Examiner, for purposes of determining the patentability of claim 86, is referred to the description of the prior art including the paging receiver(s) 119 and peripheral device 119' in Figs. 2 and 7 as described in the specification. Further, a description of a connection of a receiver to a peripheral device as prior art is found in the United States Patents and pending applications identified on page 9 of the specification.

The substitute Appendix contains numbered pages which are consistent with the description of the page numbers of the Appendix on page i of the specification as amended. The copyright notices on pages 4 and 10 of the original Appendix have been deleted from pages 4 and 10 of the substitute Appendix to be consistent with the copyright notice which precedes page 1 of the original and substitute Appendix. The description of the Appendix on page i of the specification has been amended to refer to pages 10-12 as being the program for controlling the operation of the interface switch. Deleted pages 13-14 were not used as the code for controlling the interface switch.

The inventors will file a Supplemental Declaration affirming subject matter of this Amendment as being part of their invention as filed.

Please charge any shortage in the fees due in connection with the filing of this paper, including extension of time fees, to the deposit account of Antonelli, Terry, Stout & Kraus, Deposit Account No. 01-2135 (780.29767X00), and please credit any excess fees to such deposit account.

Respectfully submitted,
HENDERSON & STURM
